

endura^{PRO}™ 460V

As the commercial HVAC market continues to grow, Genteq is also growing to develop products to fit your needs. The Endura Pro 460V is the first high-voltage variable speed available for direct drive blower applications. The Endura Pro 460V is designed off of the Endura Pro motor used in residential HVAC, therefore it has similar performances and input connections, including five selectable constant torque settings controlled by 24 VAC inputs.

Endura Pro 460V brings the benefits of ECM to high voltage applications without the need for a bulky, lossy, step down transformer which would need to be partnered with a standard voltage ECM. Not only does it bring these benefits, it also has up to 82% efficiency. If you are using standard voltage Endura Pro in commercial HVAC, this is the drop-in replacement motor for you.

FEATURES

- Variable speed operation from 600-1200 rpm
- Available in 1/2, 3/4 and 1HP options
- Five selectable constant torque settings controlled by 24 VAC inputs
- 6kV surge protection
- Similar performance to original Endura Pro
- Similar input connections to original Endura Pro

BENEFITS

- Efficiency up to 82%
- First high voltage, variable speed ECM available for direct-drive blower applications
- Brings the benefits of ECM to high voltage applications without the need for a bulky, lossy, step-down transformer to be partnered with a standard voltage ECM
- Drop-in replacement for original Endura Pro motors
